**iGuidelines iido.namej**

Submit a GitHub link to the excel sheet before 4 P.M.

Success!!

Visit your twitter Profile Page

Above is an example:

Twitter Clone Assignment

Part 1

For the user details and information select one user from this API:
https://jsonplaceholder.typicode.com/users

E.g., you can select user 1: https://jsonplaceholder.typicode.com/users/1

Use the information of the user to build the profile page (some data might be missing- hard code or ignore but use your own images)

Part 2 the posts/tweets

Depending on the selected user

Get his/her posts from this API: https://jsonplaceholder.typicode.com/posts (filter by your selected userId)

Part 3

Add a show comment to every post and on-click show the comment for the post

Get the comments from https://jsonplaceholder.typicode.com/comments (filter by postID)

Sample App: https://twitter-signals-7iou.vercel.app/
